Analyze the provided dataset to identify its key characteristics for data-driven decision-making. Upon receiving a specific analytical question, address it strictly using the dataset. Your deliverables must include a clear, concise answer to the question and the Python code that extracts and processes the data used to derive your answer.

I'll first inspect the dataset to understand its structure and key characteristics. Then, you can provide a specific analytical question, and I'll extract insights accordingly.

Let me load and preview the dataset.

Dataset Overview

- Rows: 231,636
- Columns: 19
- Key Features:
 - Geographic info: StateCode, MunicipalityCode
 - Time info: MonthIssued
 - Financial info: FundingValue, InvestmentValue, CommercializationValue, IndustrializationValue, ContractTotalValue
 - Other: EconomicActivity, FinancialInstitutionCNPJ

Now, provide a specific analytical question, and I'll extract the relevant insights using Python. [↗]

What is the total contract value in the first month of the year?

The total contract value for contracts issued in the first month of the year (January) is **19,878,678,416.72**.

Here's the Python code used to derive this:

```
python
# Filter dataset for contracts issued in the first month (January)
january_contracts = df[df["MonthIssued"] == 1]

# Calculate the total contract value for January
total_contract_value_january = january_contracts["ContractTotalValue"].sum()
total_contract_value_january
```

Copy

Edit

Let me know if you need further analysis! [↗]
